

MusikMesse, Frankfurt – 02 April 2004

PeterTools, the young Italian software house, announce its first product *LiveSet*.

The tool is a powerful and hugely versatile realtime MIDI processor explicitly designed for live use. Featuring a virtual rack framework and a wide range of built-in modules, any MIDI signals routing is possible. With its high *ReWire* integration it is intended to be used with the amazing *Propellerhead's Reason*, giving users an unsurpassed parameter access and finally control over every detail of their live sessions.

Key splitting, connection cables and smart *ReWire* devices filtering are just few of the features. *LiveSet* 1.0 will be released as a boxed version during the summer.
